# HUB

## Alphanumeric Fix Code

We now allow alphanumeric characters in fixed promo codes. Each code can be a maximum of 100 chars, and a single code cannot be utilized for distinct promotions within the same business.

### Fix Code

*All customers can redeem this promotion using the same numeric code*

Enter code **NewCode2024**

*promoCode.displayTab.allowed.characters*

## Restart of Ended Fix Promo Code

Fix code campaigns that were ended can be restarted without any time limit. The same fixed code cannot be used for different promotions for the same business (even if the campaign is ended).

TYPE	NAME	BENEFIT	CODES	STATUS
Fix	New alphanumeric Code	Give ₩10.00 off entire purchase		Ended

## Exclude tax from means of payment

In Tax Excluded countries, the merchant can exclude tax from a means of payment, adding points/credit through automation, and controlling the accumulation of the members.

## And/Or Relations for Filter and One-Time Conditions

The relationship between filters and one-time conditions can now be defined as either "And" or "Or," enabling the creation of new filter levels and segment formation

The screenshot displays a 'Filter by:' configuration window. At the top right is a 'Clear' button. The interface is divided into two main sections: 'Member attributes' and 'Member actions'. Both sections have a header with a plus icon, the section name, and a list of examples (e.g., tag, point balance, home location, and more for attributes; e.g., made a purchase, didn't purchase, and more for actions). Each section contains radio buttons for 'AND' and 'OR' logic, with 'OR' selected. The 'Member attributes' section shows two identical rows: 'First Name' followed by a dropdown menu, the word 'is', another dropdown menu, and 'FirstName'. Below these rows is a '+ Add member attribute' button. The 'Member actions' section shows two rows. The first row is 'Made a purchase' followed by a dropdown menu, 'Since Ever - 03/03/2024', and another dropdown menu. Below this row are '+ Add criteria' and '>> Apply to multiple purchases' buttons. The second row is 'Joined the program' followed by a dropdown menu, 'Since Ever - 03/03/2024', and another dropdown menu. Below this row are '+ Add criteria' and 'Select another member action' buttons.

## Bugs fixes

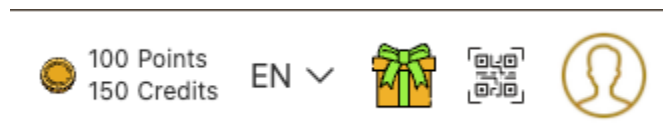

1. Item code component - Unable to Paste Item code list on Edge and Firefox browsers - Fixed.
2. Member profile - Forced refresh manually to see the update of the removed gift - Fixed.

# Customer Portal

## Points/Credits setting

The merchant utilizing the payment ratio can now showcase it on the portal, illustrating, for instance, a ratio of 2 non-monetary points to 1 monetary point (for spending).

Point Name <b>Point</b>	Point Name Plural <b>Points</b>	Points Balance <b>Non-Monetary</b>
Credit Name <b>Credit</b>	Credit Name Plural <b>Credits</b>	Credits Balance <b>Monetary</b>

## Custom Menu Dynamic Buttons

Dynamic buttons from the custom menu can now be presented on either the profile screen, the side menu, or both screens.

## Show/hide Phone Number or Email from Registration

Now we can remove phone number or email from the registration form on the customer portal. To show the phone number or email all the fields in the registration form section should be enabled.

When one of the fields is disabled it will hide the phone number or email from the registration form in the customer portal.

The screenshot shows a registration form in a customer portal. At the top left, there is a hamburger menu icon and a logo. The main heading is "Hey You," in orange, followed by the subheading "Register Now and Enjoy the Benefits". The email field is highlighted with a red border and contains the text "comopos@como.com". Below the email field are two input fields for "First Name" and "Last Name". There are two radio button options: "Allow Email" and "Allow SMS", both of which are currently unchecked. Below these options is a paragraph of text: "By checking this box, I acknowledge that I have read and understood the La Burger R [Terms of Use](#) and [Privacy Policy](#) and , [Business terms](#) and agree to its terms". There is a "SIGN IN" button and a link labeled "BACK TO LOGIN SCREEN".

**Note: To implement changes in the customer portal form, you must save the modifications once again in the customer portal section.**

# API

## Friend Referral API

Now, we have the capability to share our friend referrals with external apps. This feature enables third-party developers to generate and present unique friend referral links. These links allow customers to invite their friends to join the program, offering the customer a reward for each friend that joins.

External apps can also develop their own registration process, including a referral code property for members who have a friend referral code to join the loyalty program.

For more details, reach out to your CSM or integration team.

# APP

## Latest Version

Android Version: 3.0.12 - (minimum Android version supported - 5)

iOS Version: 3.0.12 - (minimum iOS version supported - 12)

### Phoenix Version: 3.0.1 - new version

- **Minimum binary version iOS: 3.0.12**
- **Minimum binary version android: 3.0.12**

## Bug Fix

- Fixed the issue where a react-native-fast-image library has old code and it was causing the app to crash on launch
