HUB

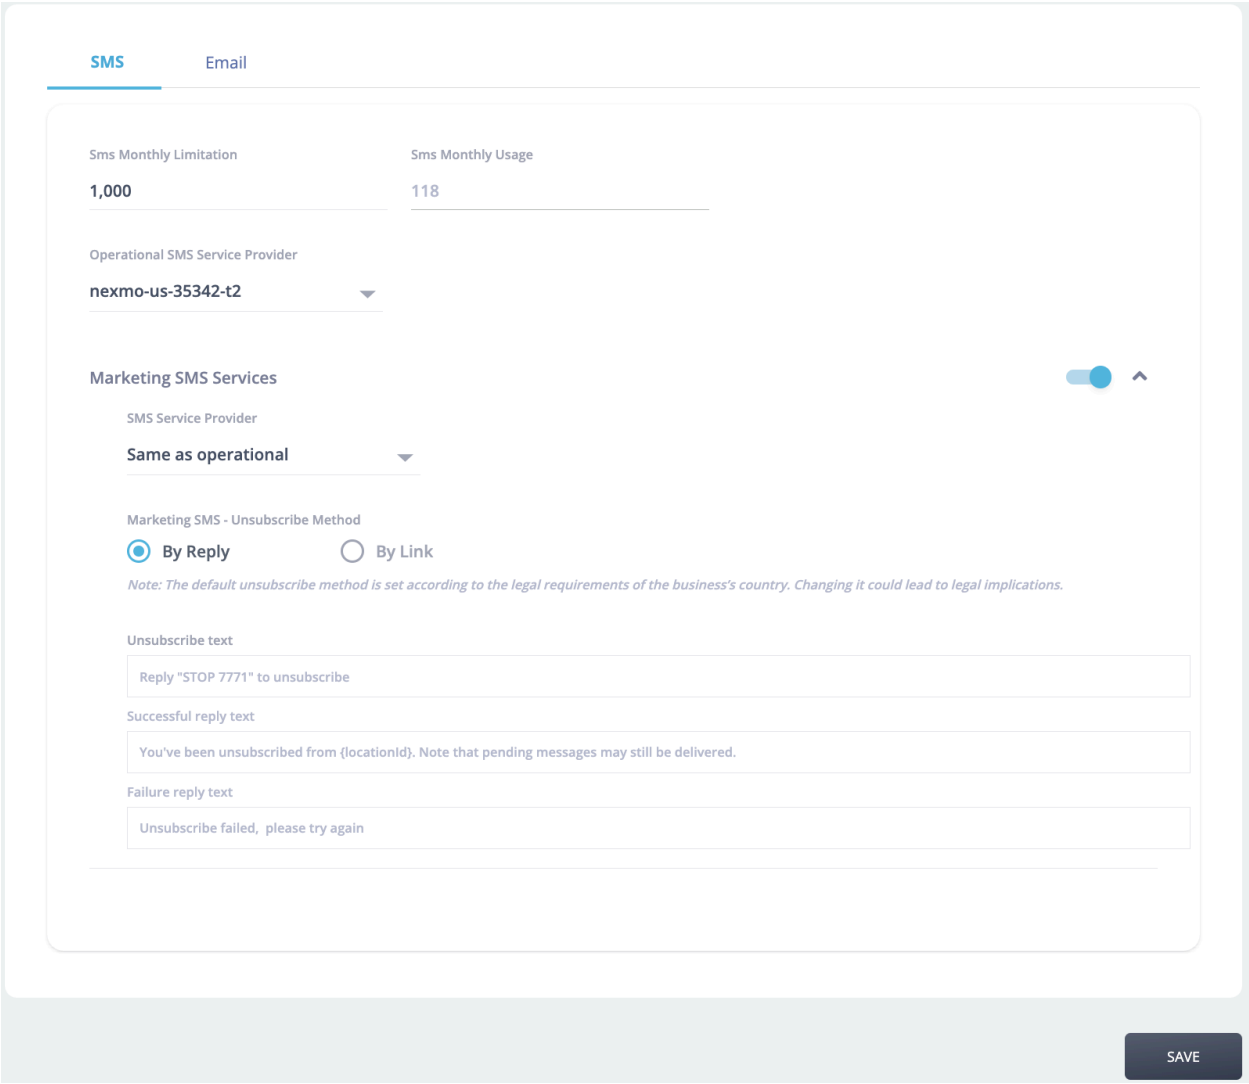

Member Profile

Now, we allow Push Notification actions for members without a phone number. This feature aligns with our last feature, which allows members to log in to the app with an email address.

Communication Settings

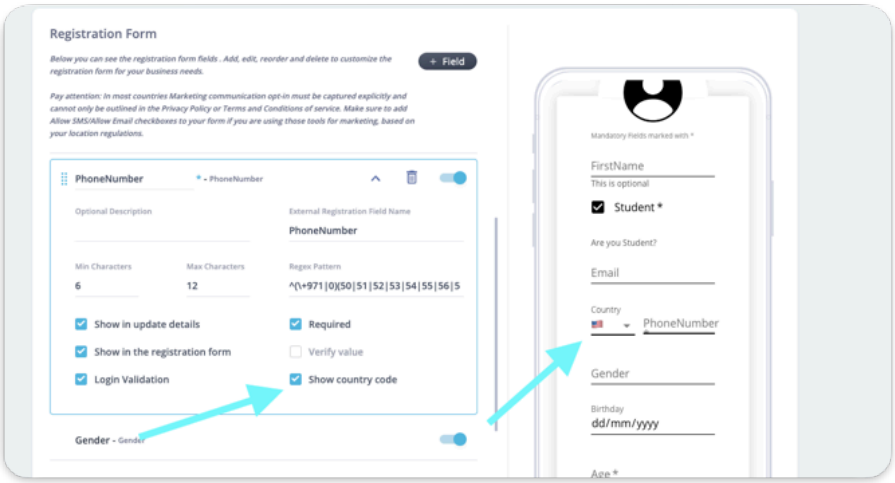

We have split our Communication Settings for each method (SMS, Email, Push) so that each one stands on its own. This tweak allows the merchant to operate smoothly with each method independently, without depending on the rest.

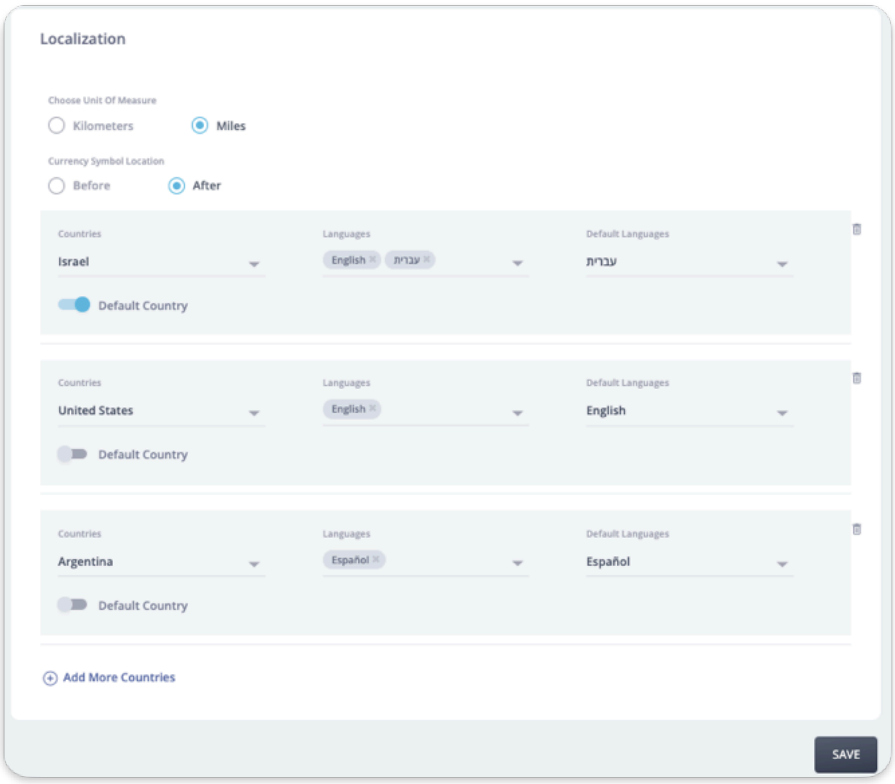

Registration Form - Country Code

We're excited to announce the addition of country code configuration for the phone number field. This enhancement marks a significant advancement for our service, especially for businesses operating in multiple regions. When you check the box to display the country code, it will automatically retrieve countries from the customer portal.

Note: To implement these changes in the country code configuration, remember to save the settings in the customer portal first, and then save the registration form.

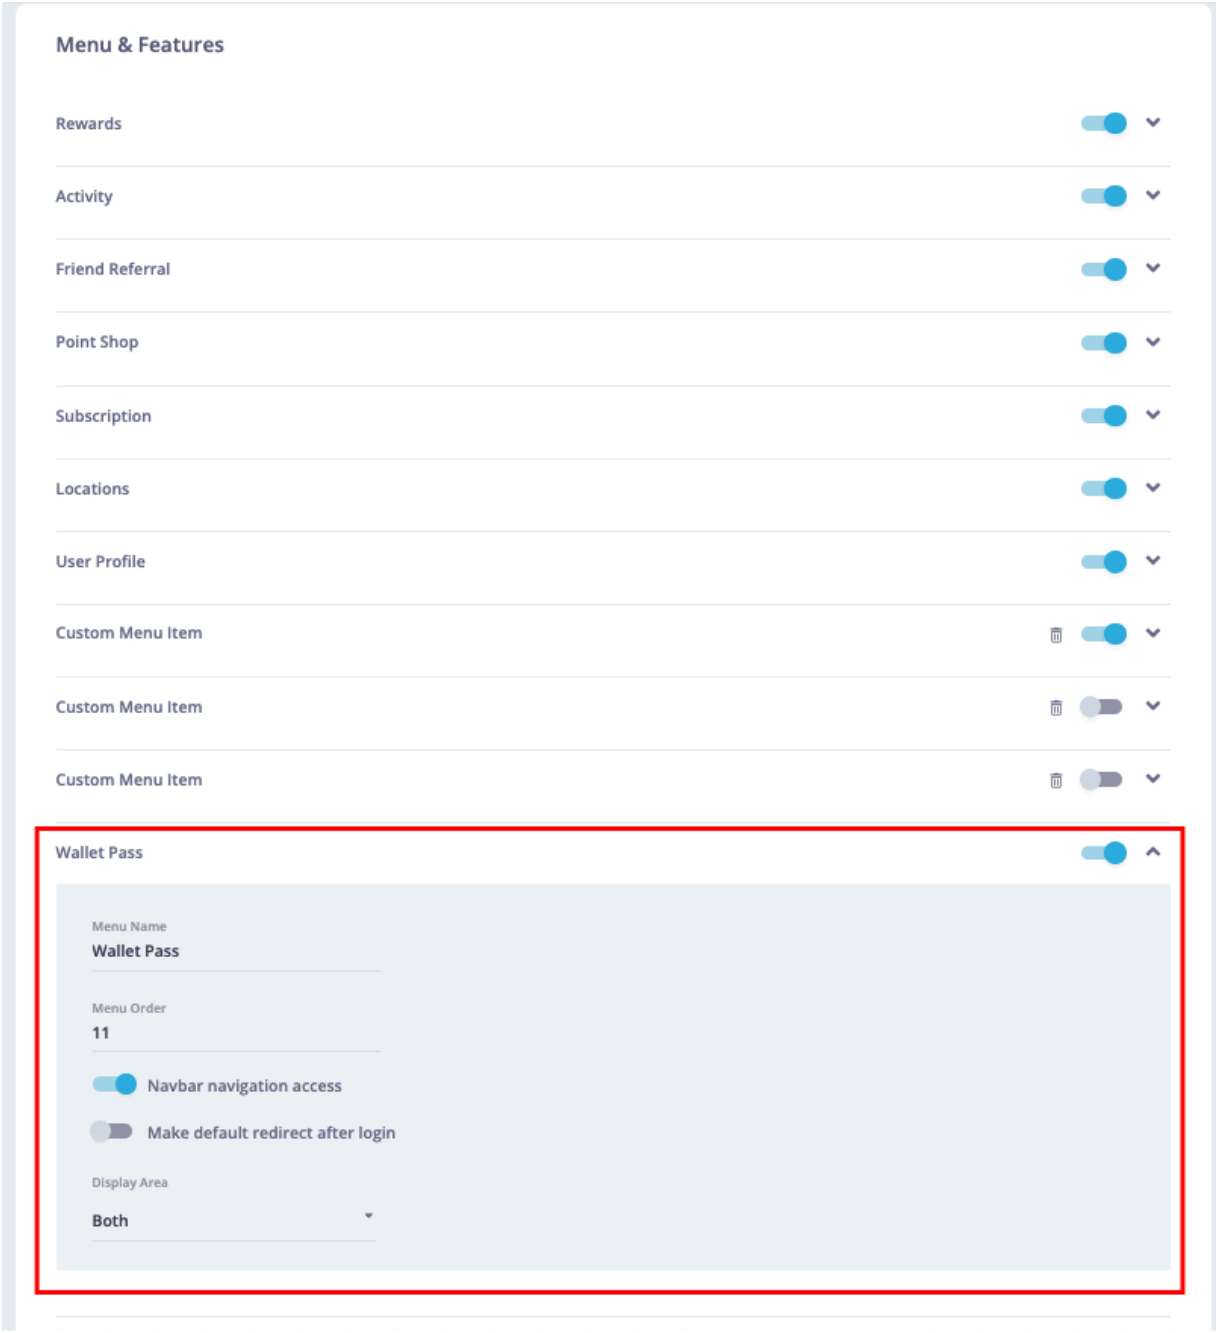

Bug Fixes

1. Locations list - scroll fails to show the full list
2. Update maps API keys both for creating new locations and for uploading location bulk.
3. Welcome email upon hub user creation and reset password - fail to be sent.
4. Rule conditions crush when the condition is on a specific field and the field is no longer on the registration form.

Customer Portal

Wallet Pass Configuration

We've added wallet pass configuration to Menu & Features, giving you control over the order and name of the wallet.
This feature is only available for businesses with an active wallet pass.

App

Latest Version

Android Version: 3.0.13 - (minimum Android version supported - 5)
iOS Version: 3.0.13 - (minimum iOS version supported - 12)

Phoenix Version: 3.0.5 - new version

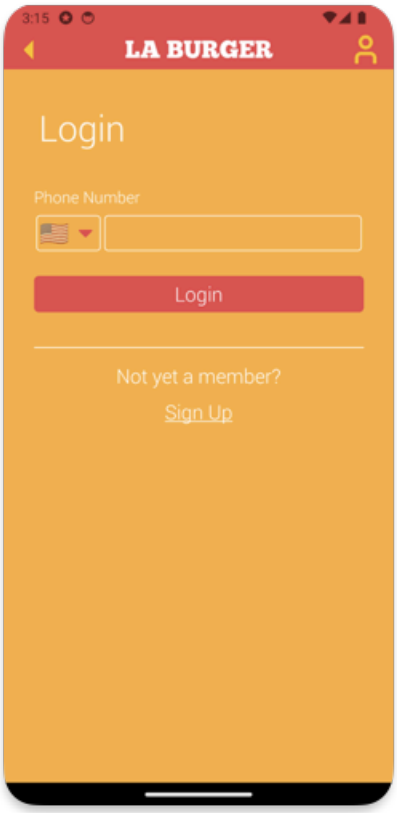

- Minimum binary version iOS: 3.0.13
- Minimum binary version android: 3.0.13

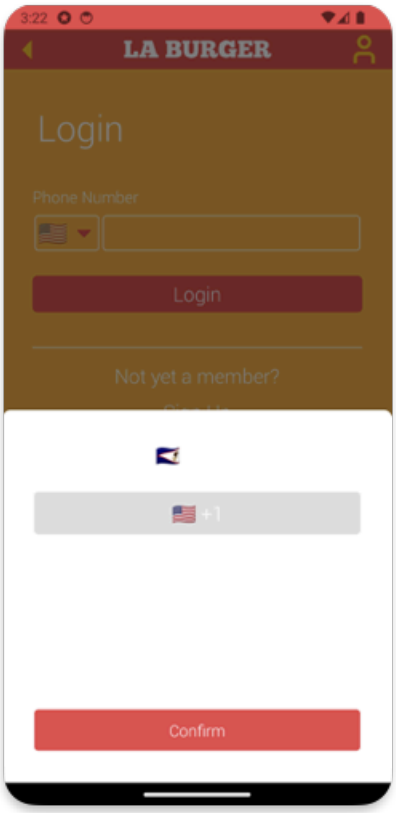

Country Code Selector

Following the latest development in the registration form, we have added a country selector on the login screen within the app.

After making all the configurations in the customer portal and the registration form, please follow these steps:

1. Go to Hub 1 >> Branding (New) >> Design (New).
2. Set "Login Screen - Allow Login With Phone Number Or Email" to OFF.
3. Save and update the app.

Customizable Location Screen

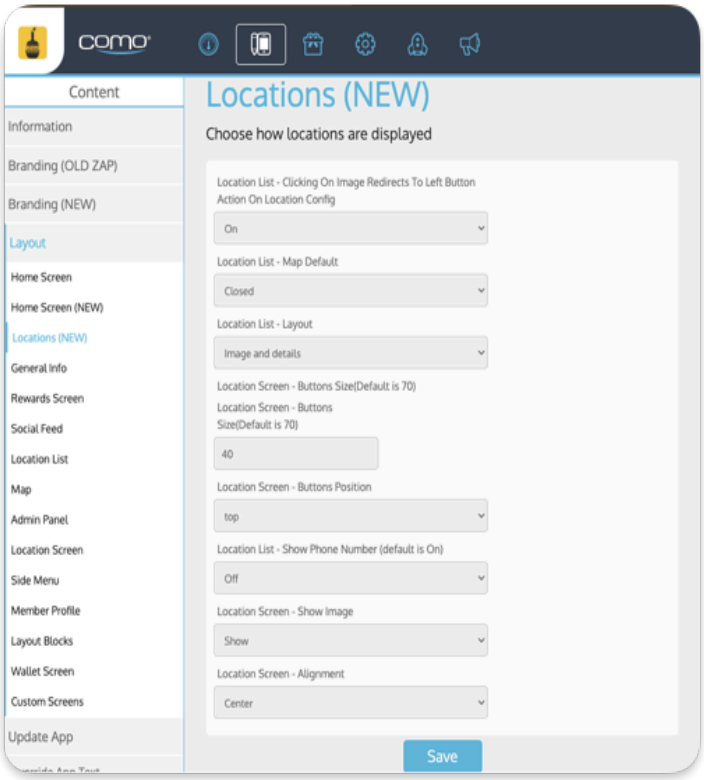

We have added a new feature that makes the location list and details screen customizable. Now you can change the text on the location screen to display store details and configure quick navigation on the location icon to dedicate a web view.

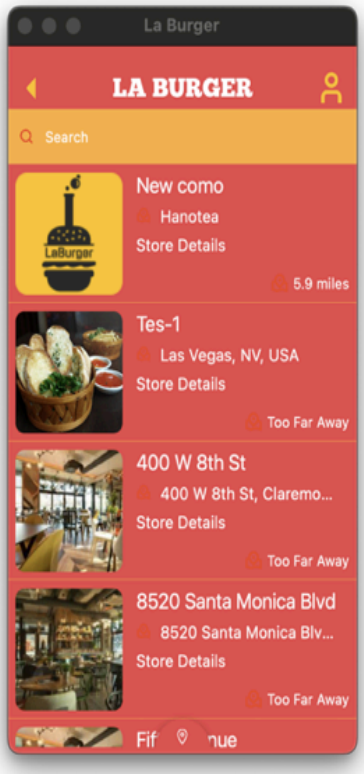

To use this configuration, follow these steps:

1. Go to Hub 1 >> Layout >> Location (New).

Now you can use the following configurations:

- Location List - Clicking On Image Redirects To the Left Button Action On Location Config
- Location List - Show Phone Number (default is On)
- Location Screen - Buttons Size (default is 70)
- Location Screen - Buttons Position (top or down)

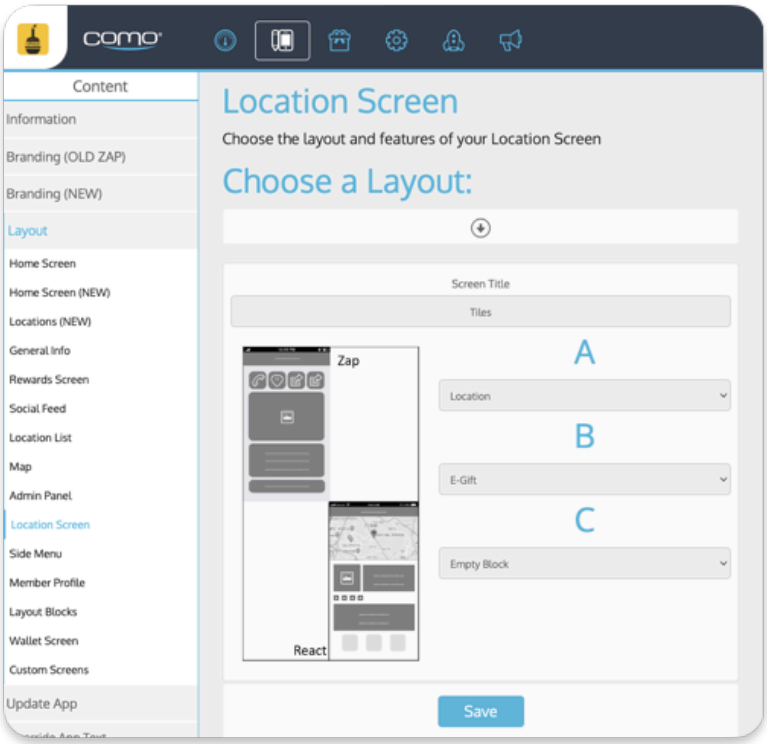

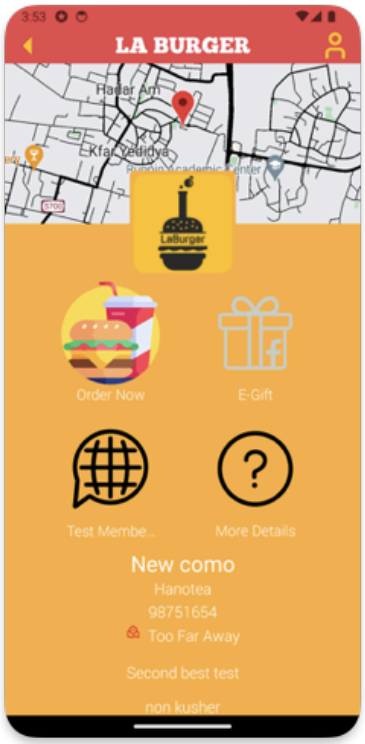

Adding new buttons to the location screen:

1. Navigate to Layout >> Location Screen.
2. Choose a screen.
3. Set the buttons for A tile and B tile.
4. Save and update the app.

Note: We can add 2 additional buttons to the default ones under Location >> Location.

Bug Fix

- Added a scroll feature to long texts in the gift description
