# HUB

## Tokenization Flags - Beta

The Card-Based Segmentation approach streamlines operations, improves the efficiency of loyalty programs and generates valuable data that enables the merchant to learn more about purchasing behaviors in their business.

**Collect Identification Payment Token:** enables the ability to collect payment tokens for segmentation purposes.

**Identify By Payment Token:** enables the ability to identify member based on their payment token that is linked to their profile.

**Note: Limited availability.**

The screenshot shows the 'API Keys' configuration page. At the top, there is a tab labeled 'default' with a '+' icon to its right. Below the tab, there is a toggle switch labeled 'Active' which is currently turned on. Underneath, there are two fields: 'Name' with the value 'default' and 'API Key' with the value '5\*\*\*\*\*9'. To the right of the API Key field is an eye icon. Below these fields, there are three more toggle switches: 'Can give consent?' (Inactive), 'Support promo code redeem in submit purchase?' (Inactive), and 'Point Shop at POS' (Not Available). At the bottom, there are two more toggle switches: 'Collect Identification Payment Token' and 'Identify By Payment Token', both of which are currently inactive. These two switches are highlighted with green boxes. At the very bottom, there is a section for 'Adjust purchase time' with a toggle switch and a text input field.

API Keys

default +

☒ Active

Name: default API Key: 5\*\*\*\*\*9

Can give consent? ☐ Inactive

Support promo code redeem in submit purchase? ☐ Inactive

Point Shop at POS ☐ Available ☒ Not Available

Collect Identification Payment Token ☐

Identify By Payment Token ☐

Adjust purchase time ☐ \_\_\_\_\_ ?

## New Permissions Level

We added 4 new sensitive roles for delete member + export members actions:

Permissions	Description
Hub Super User without export + SensitiveLegalActions.	User with permission to delete members but without the ability the export data from filter member function.
hubSuperUserWithSensitiveLegalActions.	User with permission to delete members with the ability to export data
Hub Super User + Looker + SensitiveLegalActions.	User with permission to delete members with the ability to export data + access to report system.
Hub Super User without export	Users without the ability to export and delete members

## Agent Configuration- Beta

We added a new feature flag for our agent feature, which allows us to control agent configuration within the HUB.

**Note: Limited availability.**

## Update Details Form

The next step for a seamless customer portal experience is to update the details form retrieved from the HUB update form. Now, with the full registration form mode enabled, we have seamless registration and update forms.

The screenshot displays a web application interface for updating a user profile. The page is divided into two main sections: a form on the left and a large graphic on the right. The form, titled "Update Profile", includes input fields for "First Name" (filled with "Como"), "Last Name" (filled with "POS Team"), "Phone Number" (filled with "649091022"), and "Email Address" (filled with "shahar@como.com"). There is also a "Birthday" field. Below these fields is a checkbox for terms and conditions, which is currently unchecked. The "UPDATE" button is at the bottom of the form. The right section features a large yellow square with a black silhouette of a burger. The burger has a single candle on its top bun, and the words "LaBurger" are written in a bold, black, sans-serif font across the middle of the burger. The top of the page shows a navigation bar with a hamburger menu icon, a user profile icon, and a status bar indicating "0 Point", "0 Credit", and "EN".

**Update Profile**

First Name \*  
Como

Last Name \*

# API

## Get Identification Code

We have now enabled the option to request the Como identification code through additional identification methods.

## Sorting Point Shop Retrieved Via API

We sort the point shop items in the getMemberDetails + pointShop calls, which allows us to sort the point shop items in ascending order.

## Subscribe To Push Notification

We have now added the ability to subscribe to the Como push notification service using more identification methods.

# Data & BI

## Update Reports Dimension Fields

Update the promo code, deals, benefit, and punch card report single purchase dimensions to align with parameters for more advanced analysis, facilitating data-driven decision-making.

# App

## Latest Version

**Android Version: 3.0.16** - (minimum Android version supported - 7)

**iOS Version: 3.0.16** - (minimum iOS version supported - 13)

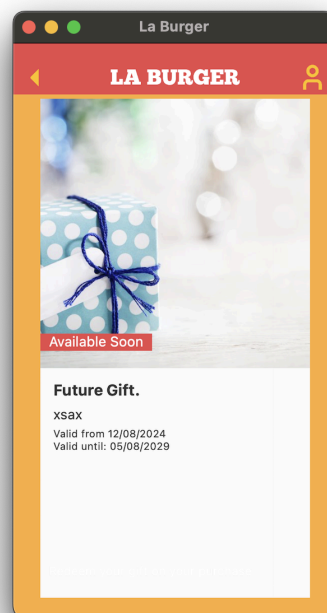

**Phoenix Version: 3.0.11**

Minimum binary version iOS: 3.0.16

Minimum binary version android: 3.0.16

## Valid From Date To Gifts

Now, on the gift list page, future benefits will display their valid-from date. This feature allows merchants to clearly communicate with their members.

## Bug Fixes

Fixed bottom header in como webview.
