HUB

Olo Configurations Screen

For businesses using Olo, we now provide access to Olo configuration settings, allowing quick adjustments as needed.

You'll find this feature under the Features & Add-ons screen.

Prevent Email Updates For Hub User

We've implemented a setting to prevent email updates for Hub users, restrict Hub users from independently changing their email addresses, enhance security, and maintain account integrity by ensuring only authorized updates.

Point And Credit

We've migrated Pay With Budget Max/Min settings to HUB 2 from HUB 1! Now, you can easily set payment restrictions right from the POS & Connectivity screen for seamless control and convenience.

Point And Credit

Pay With Budget Max Sum

Pay With Budget Min Sum

Bug Fixes

1. Fixed wrong Generic Date (3-9) Values conditions on rule
2. Fixed salesforce issue on creating new business

Agent

Member Lookup

We've introduced a new member lookup feature, making it easier than ever to find members with quick, dynamic searches by first or last name. This enhancement allows for faster access to member profiles—simply type and find! You can enable this feature in the Agent Configuration screen.

Customer Portal

Unique Field Verified on Profile Update

We've strengthened account security with an added layer of 2FA. Now, anytime a verified field is updated, users are prompted for 2FA verification, ensuring all sensitive information remains aligned and safeguarded. This enhancement not only keeps accounts more secure but also builds trust by protecting critical data at every step.

API

getIdentificationCode Expiration Time & Date

We've added a new timestamp feature for the getIdentificationCode call, allowing third parties to see the exact time and date of each request. This improvement enhances transparency, giving end users clear visibility into their identification window for a more seamless and informed experience.

Data export email links expire in 48 hours

Data export email links now expire within 48 hours, ensuring enhanced data security and timely access. Users are encouraged to download their exports promptly, as expired links will require a new request to regain access. This update aligns with best practices for data protection and user convenience.

Data & BI

One-time Analysis Dashboard

We're thrilled to introduce the One-Time Analysis Dashboard! This powerful new feature gives merchants a comprehensive view of one-time activities and scheduled actions, complete with insights into daily and monthly trends. Dive into detailed counts of actions and applied members for each one-time activity, all in one easy-to-navigate dashboard.
