## Registration/Update Details Form Multi-Language Support

We're excited to introduce multi-language support for the **Customer Portal's** Registration and Update Forms, allowing you to translate registration fields and descriptions into any supported language. To enable this feature, simply configure additional languages in your Customer Portal settings and provide a more inclusive, localized experience for your users.

The image displays two screenshots of the Customer Portal configuration interface. The left screenshot shows the 'Registration Form' configuration page. It features a list of fields with their corresponding labels and a 'Field' button. A language dropdown menu is open, showing 'English' and 'Español'. The right screenshot shows the 'Sign Up' form preview, which includes fields for First Name, Last Name, Email, Birthday, and Phone Number, along with checkboxes for 'AllowSMS' and 'AllowEmail'. The rightmost screenshot shows the 'First Name R' configuration page, which includes a language dropdown set to 'en\_US', a list of fields with their labels, and checkboxes for 'Show in update details', 'Show in the registration form', 'Required', and 'Disable field after registration'.

Registration Form

## Olo - Allow Communication Checkbox

We've introduced a new configuration on the Olo settings screen, enabling users to control whether the "Allow Marketing" checkbox is marked by default, offering greater flexibility in managing marketing preferences.

The screenshot displays the Olo settings interface. It includes fields for Logo, Terms of use, Privacy Policy, and Olo Base Url. Below these are three dropdown menus for API Key (set to Connect OLO), Point Shop Wallet (set to Points), and Business Time Zone (set to America/New\_York). At the bottom, there are three toggle switches: 'Show Birthday field' (checked), 'Merge Modifiers Costs' (unchecked), and 'Marketing Communication Default' (checked). The 'Marketing Communication Default' toggle is highlighted with a green border. At the bottom right, there are 'Delete' and 'SAVE' buttons.

## Bug Fix

- Date picker on the registration form

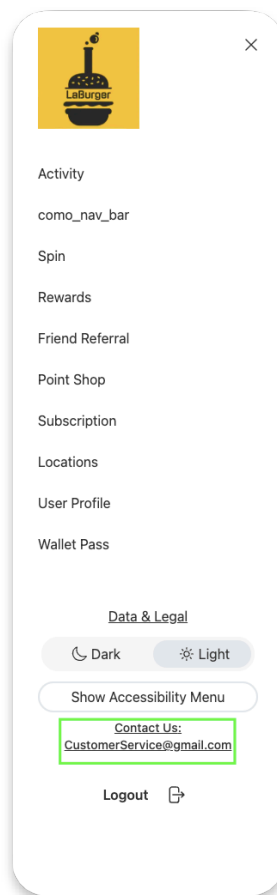

# Customer Portal

## Registration/Update form multi-language support

The Customer Portal now supports multi-language functionality for its Registration and Update Forms, making it easier than ever to create a more inclusive and localized experience. With this enhancement, you can translate registration fields and descriptions into any supported language, ensuring your portal meets the needs of a diverse audience. Simply configure additional languages in your Customer Portal settings to unlock this feature and offer seamless, multilingual interactions for your users.

## Contact Us in the Side Menu

We've added a new Contact Us feature to the Customer Portal's side menu, making it easier for users to quickly access merchant customer service whenever they need assistance.

## Registration Form Age Restriction

We've updated the age restriction settings in the registration process to align with your Hub configuration. For more details, visit our [knowledge base](#).

## Bug Fix

- Request for HTML Support in Translation Sheet for Line Breaks on CP Screen
- Forms - Case Sensitivity Issue in Context Key Mapping

# APP

Android Version: 3.0.17 - (minimum Android version supported - 7)

iOS Version: 3.0.17 - (minimum iOS version supported - 13)

Phoenix Version: 3.0.16

- Minimum binary version iOS: 3.0.17
- Minimum binary version android: 3.0.17

## Support Of Dark/Light Mode For New Purchase History/Survey Screen

Our embedded Purchase History screen now supports dark and light mode options, giving users greater control over screen visibility and personalization. To enable this feature, simply add a "theme" parameter to the custom settings and choose either "dark" or "light" as the value.

The screenshot displays a configuration interface for an application. It is divided into three main sections: Base URL, Default Params, and Custom Params.

- Base URL:** A text input field containing the URL `https://7771.comosense.net/member/activity`.
- Default Params:** A section containing three rows of parameters. Each row has a parameter name in a light gray box, a value in a light gray box, and a trash icon to the right. The parameters are:
  - token: User Token
  - locationid: Location ID
  - TemporaryToken: <16\_hours\_temporary\_token>
- Add default parameter:** A link to add new default parameters.
- Custom Params:** A section containing five rows of parameters. Each row has a parameter name in a light gray box, a value in a light gray box, and a trash icon to the right. The parameters are:
  - inAppBrowser: false
  - hideNavBar: true
  - cookieConsentGrantedExl: true
  - preloaded: false
  - theme: dark
- Add custom parameter:** A link to add new custom parameters.

## Bug Fix

- The tile widget is not in line when added more characters in the name
- App crashes when clicks on pin location
