

# RELEASE NOTES

January 2021 | phoenix & Android & iOS release

## Version Content

**Android Version: 2.2.2 - new version**

**iOS Version: 2.2.2 - new version**

**Phoenix Version: 1.5.8 - new version**

- **Minimum binary version iOS: 2.2.2**
- **Minimum binary version android: 2.2.2**

### Deep linking:

- [Deep link to web view](#)
- [Dynamic parameters of deep link](#)

### Push notifications:

[Clickable link from Push Notifications](#)

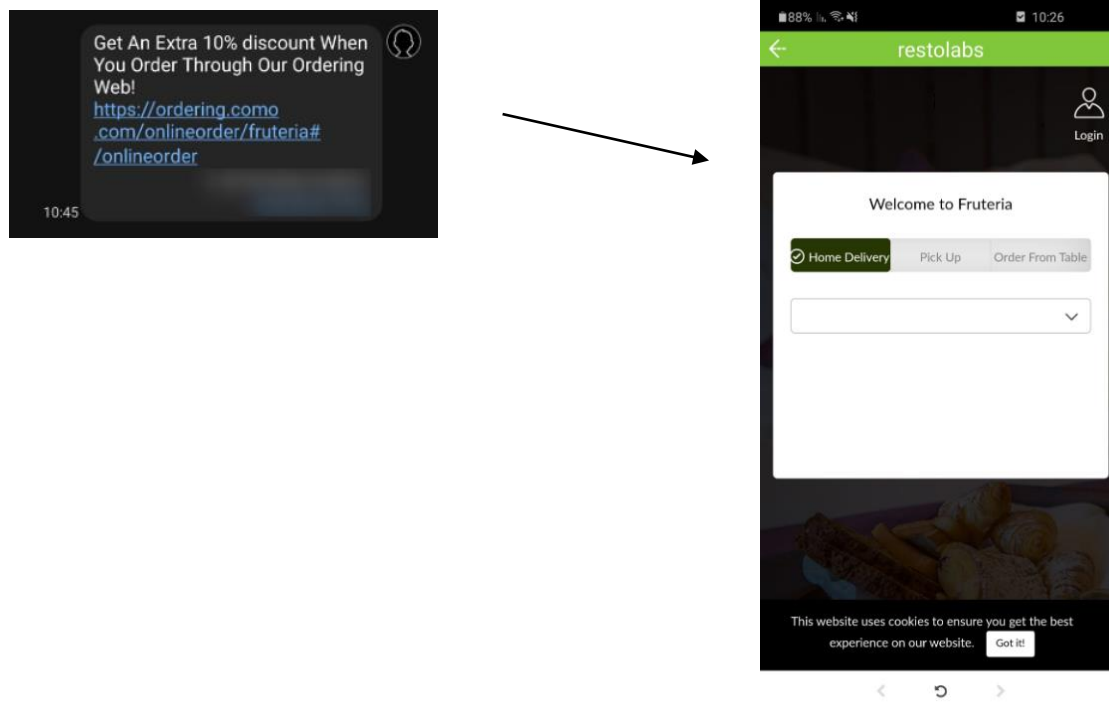

### Bug fixes

## Deep link to webview

Dynamic Links help to control where a user lands depending on whether they have an app installed or not. Having such behavior gives a richer user experience when interacting with marketing campaigns.

You can send the link through an SMS, Push, or publish on your social media.

For example- send through SMS your ordering web view- When the user will click on the deep link - it will redirect him to the app and then will open the web view you defined.

For more information search in the Knowledge Center: *How to create a deep link.*

## Dynamic parameters of deep link

Add UTM parameters in the final section of the dynamic link creation (for example: Campaign source: Google and Campaign name: Winter Sale).

When the user clicks the dynamic link with the app already installed, these are the values that send to the firebase analytics.

### 5 Campaign tracking, social tags and advanced options (optional)

Add social meta tags for better sharing [?](#)

Track a campaign with UTM parameters [?](#)

Campaign source (utm\_source) [?](#)

Google

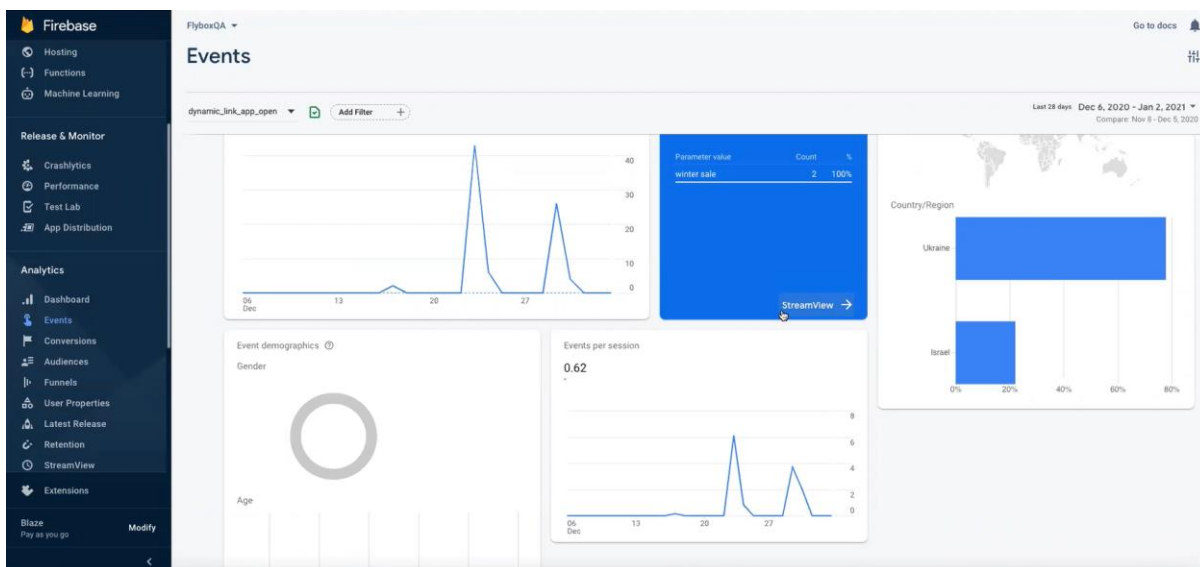

Campaign medium (utm\_medium) [?](#)

Campaign

Campaign name (utm\_campaign) [?](#)

Winter Sale

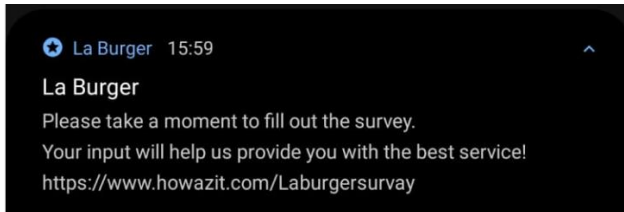

Skip the app preview page (not recommended) [?](#)

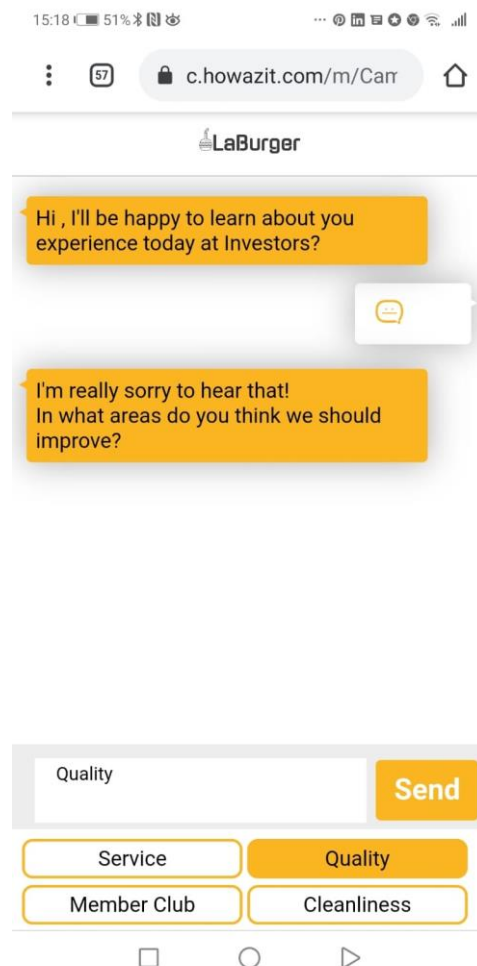

## Clickable link from Push Notifications:

When members click on the push notification from their lock screen- the app will be opened and then the web view will pop up with the URL from the push.

For example- send external survey (e.g., Howazit) with Push Notification:

Click on the push

## Bug fix

- deep link to ios app not working using Firebase - [CNP-18765](#)  
Firebase dynamic link setup is required in hub1 before submitting the app.  
(check comment on “Deep link to webview” in Features)
- Member invite code not aligned on app - [CNP-18778](#)
