SMS Status: Processing by Carrier.....	13
Validation added on Filters for Rules	14
Toggles to Remove Ad and Footer Indication	15
“Automated” option added for Consent Communications	16
Last Store Visit Count Looker.....	17
Latest App Version.....	18
Bug Fixes	18

Action Filter

A new Action Filter has been added within the Campaigns section of the HUB. Select all, one or multiple Filters to adjust the results according to your needs. Unlike Triggers which only show Rules, the Action Filter will show all types of Campaigns based on the filtered action.

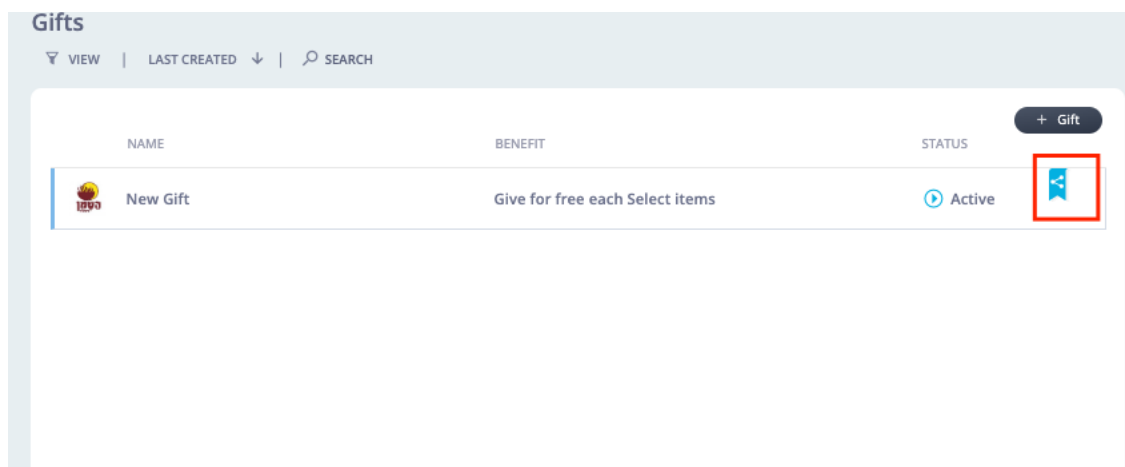

Keep in mind, when using the Trigger Filter, it will return only Rules with the status of Active, Future or Draft.

Share Icon on Gifts using Share Functionality

A new Share Icon will appear on gifts that currently have the share functionality enabled, allowing them to be easily identified.

Support for Multiple Custom Headers and Bodies within an Export Event

Further enhancements have been added to the Export Event action to allow for use of multiple headers and bodies. Extremely useful as it will allow the business to add more

information within the exported event which otherwise may not be sent by default.

Added One-time Analysis on Activities and Activities Table

Easily view results of a one-time activity by navigating into the completed activity and selecting the “statistics” button. Alternatively, in the Table View you can select the “3-dotted button” and then “analysis” to view the results.

Completed One-Time action Hint

The Completed One-Time Action hint serves as an indicator to let the business know that additional members may have been adjusted to the one-time, since the initial filter.

The screenshot shows the 'Completed' configuration screen for an action named 'futuer o'. At the top, there is a navigation bar with a 'BACK' button, the action name 'futuer o' with a '+ Add description' link, the status 'Completed', and 'CANCEL' and 'ACTIVATE' buttons. A yellow banner below the navigation bar states: 'This activity was already Completed and cannot be changed.' The main content area is titled 'For Members' and contains a dark grey notification box: 'Total member count may not be updated since this activity was created.' Below this, there is a section 'Apply it' with icons for '~ 110810 members', 'Export to CSV', and 'Statistics'. A horizontal line separates this from the 'Perform Actions' section. In the 'Perform Actions' section, there are options for 'A/B testing' and 'Split to several cases'. Below this, there is a 'Perform it' section with a calendar icon and the date '09/30/2022 6:09 PM'. The 'Do' section contains a dropdown menu for 'Add Points', a text input for 'Fixed number of points', and a row with 'Add', '1.00', 'to', 'Points', and a dropdown arrow. The 'And do' section is partially visible at the bottom.

Phone Number List added to Filter on One-time Action

Businesses can now use the Specific Phone Number Filter to define a population. Phone Number can be pasted (up to 15k) or uploaded via a file (CSV or Excel file.)

Ahmed Gift Quantity 1

Ahmed Gift is expired. The validity dates of the benefit need to be changed for members to receive it.

Business Time has been added to the Header of the HUB

Easily view a Business's time zone, date format and current time directly in the header of the HUB. This feature is great for Businesses that stretch across multiple time zones where it may have not been clear as to the time activities were set for.

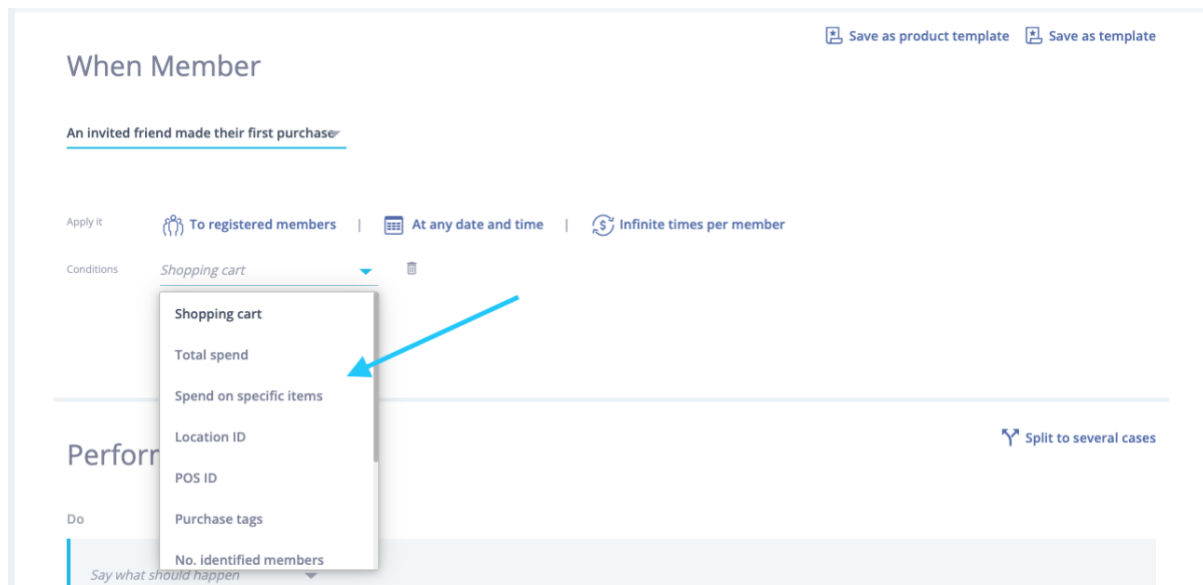

Added Autofocus Textbox on Business Profile Dropdown

Within one click a Hub user can now search for a business. The text cursor is ready for text input as soon as a click on the header dropdown.

[Demo:](#)

Conditions Added to Trigger of “An Invited Friend Made their First Purchase”

Previously, when selecting the trigger of “an invited friend made their first purchase” there were no conditions available to select for that first purchase. Now, transaction conditions have been added for further customization.

URL Text Validation for Export Event Actions

When setting up an export event and defining the URL, the system will check to see if the URL format input is correct. If not, an error will appear upon saving.

There are some issues in your activity. Fix them so you can activate it.

Registration Form Initialized Upon Hub Creation

Previously, when a new business was added to the HUB the registration fields of the form were not initialized. Now the fields First Name, Last Name, Birthday, Phone Number and Email Address are activated by default.

Registration Form

Below you can see the registration form fields. Add, edit, reorder and delete to customize the registration form for your business needs.

dd/mm/yyyy

By registering I hereby agree to the Terms&Conditions, Privacy Policy and Lovaltv

Ability to Change the Date Format for a Hub User

The updated date format gives a HUB user the ability to change their preference of how the date is displayed. This will affect how the date is displayed within HUB 2 for the HUB user. Please note, this does not actually change the Date Format setting of the business.

The screenshot shows a 'My Hub Preferences' dialog box with a blue header and a close button (X) in the top right corner. The dialog is divided into two columns of settings. On the left, there are fields for Email (Jeremiah@como.com), First Name (Jeremiah), Company (Selected items), Languages (English), and 2FA Enabled (checked). On the right, there are fields for Phone (Selected items), Last Name (Shabtai), Title (Selected items), Date Format (MM/DD/YYYY, highlighted with a red box), and a QR code for Google Authenticator. At the bottom right, there are 'Cancel' and 'SAVE' buttons.

Field	Value
Email	Jeremiah@como.com
First Name	Jeremiah
Company	Selected items
Languages	English
2FA Enabled	<input checked="" type="checkbox"/> 2FA Enabled
Phone	Selected items
Last Name	Shabtai
Title	Selected items
Date Format	MM/DD/YYYY

“External Registration Form Field” Validation

Upon saving the registration form, the validation will ensure that the External Registration Form Field is not left blank.

The screenshot displays the 'Registration Form' configuration interface. On the left, a list of fields is shown with toggle switches: 'LastName - LastName', 'Phone Number - PhoneNumber', 'Email - Email', 'Birthday - Birthday', and 'AllowSMS - AllowSMS'. The 'Email' field is selected, and its configuration panel is open. This panel includes an 'Optional Description' field, an 'External Registration Field Name' field (which has a red error message 'This field is required'), 'Min Characters' and 'Max Characters' input fields, and a 'Regex Pattern' field. Below these are checkboxes for 'Show in update details' (checked), 'Show in the registration form' (checked), 'Required' (unchecked), and 'Verify value' (unchecked). On the right, a preview of the 'Sign Up' form is shown, featuring input fields for 'First Name', 'LastName', 'Phone Number', 'Email', and 'Birthday' (with a 'dd/mm/yyyy' placeholder), and an 'AllowSMS' checkbox. At the bottom of the interface, a red error message states: 'There are some issues in your form. Please resolve them before saving'. Below this message are 'Cancel' and 'SAVE' buttons.

SMS Status: Processing by Carrier

The SMS action log status “Processing by Carrier” has been added, as previously SMS were marked as “delivery success” as soon as the SMS were accepted by carrier. This will give the business more transparency and accuracy as an SMS can still fail after being accepted by the carrier. SMS will still be marked as “Delivery Success” following “Processing by Carrier” upon confirmation from the carrier.

Validation added on Filters for Rules

When selecting specific members within the filter for rules, if an attribute is not selected and defined the filter will not execute.

Toggles to Remove Ad and Footer Indication

Toggles have been added to enable/disable the entire email footer or just the “This is an advertisement” message within an email. Based on our knowledge, all footer content is legally required in some countries including the US. Having said that, we have received few requirements from customer to remove it. If they wish to do it, it is their own responsibility, and they can remove it themselves from the hub. Do not do this action on behalf of the business.

“Automated” option added for Consent Communications

The “Automated” option will send the consent communication based on the preference of the user.

- If the user is allowing both sms and email, the consent will be sent via SMS. .
- If the user is allowing only email and not sms , the consent will be sent via Email.
- If the user is only allowing sms and not email, the consent will be sent via SMS.
- Lastly, if the user is not allowing both SMS and Email, the consent will be sent via SMS.

SMS Content

Welcome back! To earn rewards, you'll need to complete your registration to the @BusinessName loyalty program by clicking this link: @Consent.LandingPageLink

Length: 157 Charged messages: 2

Note: The actual charge for messages that include dynamic text (like member name) may vary based on the actual length of the dynamic text (like Alexander vs. John). This SMS is sent without an unsubscribe option since it notifies the member of a change in terms. However, it may be considered as a marketing SMS if sent too often per member

Last Store Visit Count Looker

The last store visit count will allow for a business to view the number of members who last visited a particular location. This is useful as the business can set a campaign to attract them back to the store where they last purchased.

Bug Fixes

- AI campaign on Hub 2 - When you select a test user to send email, email was not sent before. Now it is sent.
- When you create a new member with an anniversary date on Hub 2, the anniversary date did not appear before. This has been resolved.
- Clicking on any view filter other than Rule and Deal is showing all actions
- When the rule is in draft mode and whether you add a trigger or not in that rule, the rule does not appear in draft status in activities list.
- Purchase action log fails to open in the member section. This is due to the fact that all the transactions have been removed from datastore prior to 2019.
- Rule case probability condition CSS is not properly aligned.
- In a Rule if you change the highlighted global conditions, there is no way to know whether someone changed the condition or not.
- Promo code view filter is not working.
- One time action with less than 5000 members was getting saved.
